The Honorable Kevin McCarthy
Minority Leader
United States House of Representatives
2468 Rayburn House Office Building
Washington DC, 20515

Dear Majority Leader Schumer, Leader McConnell, Speaker Pelosi, and Leader McCarthy:

On behalf of the undersigned organizations, we write to bring to your attention an urgent situation that continues to need Congressional action to help correct: a sustained decrease in immunization rates for recommended vaccines across all ages. A bill introduced this week, the *Community Immunity During COVID-19 Act (H.R. 736/S. 167)*, addresses this situation and we urge you to include it in the next COVID-19 legislative package.

One of the unfortunate side effects of the COVID-19 pandemic is a dramatic fall in immunization rates among children and adults. The reduction in childhood immunization rates was noted early on in the pandemic in the May 8 *Morbidity and Mortality Weekly Report (MMWR)*, which showed a significant decrease in orders for Vaccines for Children (VFC)-funded, Advisory Committee on Immunization Practices (ACIP) recommended non-influenza childhood vaccines, as well as measles-containing vaccines, from January 6 through April 19, 2020, when compared to the same time period in 2019. Additional analysis from VaxCare in June found that non-influenza vaccine rates among adults dropped dramatically as well during the COVID-19 pandemic, with rates down 83 percent for adults age 65 years and older and 60 percent for individuals age 19 to 49 years.

While vaccination rates stabilized somewhat last summer, once children returned to school in the fall, whether virtual or in-person, immunization rates again dropped off. Data released in November from Blue Cross and Blue Shield showed an estimated 26 percent decrease of those receiving the Measles, Mumps, Rubella (MMR) and the Diphtheria, Tetanus and Acellular Pertussis (DTaP) vaccines, while the Polio vaccine dropped 16 percent. More recent data from the Centers for Disease Control and Prevention (CDC) mirrors this trend and shows that as of January 3, overall VFC provider orders (other than flu) are down by more than 10.5 million doses compared to the previous year, with MMR/MMRV down by more than 1.3 million doses.

Unfortunately, this decline in immunizations threatens herd immunity levels, which provide protection in a community to those who cannot be vaccinated themselves, and raises the possibility of a secondary infectious disease outbreak during the pandemic. To ensure that children, adolescents,

and adults are still receiving routine immunizations, there needs to be continued and strengthened investment in the existing immunization delivery system and sustained messaging on the importance of receiving their recommended vaccines, particularly for children attending school. In fact, making sure children receive their ACIP-recommended vaccines will be key in ensuring that more schools can reopen safely. This is also important in addressing declining immunization rates in Black communities and other communities of color. As such, the undersigned organizations urge Congress to include the *Community Immunity During COVID-19 Act* in the next COVID-19 legislative package.

The *Community Immunity During COVID-19 Act* provides much needed funding to state and local public health departments to develop, scale, and evaluate local initiatives to boost vaccination rates during the COVID-19 pandemic. It would do so by strengthening partnerships with local stakeholders such as health care providers, schools, vaccine coalitions, and community-based organizations, disseminating culturally and linguistically appropriate information through communities and online social media platforms, and conducting outreach to promote health insurance options and immunization programs like Vaccines for Children, among other efforts.

While it is understandable that Congress is focused on the development and distribution of a COVID-19 vaccine and immunizing as many Americans as possible against COVID-19, we cannot ignore the potential consequences of secondary outbreak of infectious disease during the pandemic. As such, we urge Congress to take immediate action to provide much needed funding to state and local public health departments to promote ACIP-recommended vaccinations during the COVID-19 public health emergency and include the *Community Immunity During COVID-19 Act* during the next COVID-19 legislative package.

Sincerely,
